- MOTIVE

Our primary goal is to make things less crowded for the students so they can quickly access college materials from one place.

- EXISTING SYSTEM

DAIICT often employs the intranet for academic materials, the E-Campus for student results, email as a source of information delivery, as well as many other platforms like moodle and Google Classroom.

- PROBLEMS

1. Different topic professors save their materials on various websites, such as Google Classroom and Moodle. The organisation of lecture notes is challenging for students.
2. It is difficult to keep track of all the emails sent out for the many college events.

- PROPOSED SOLUTION

We are attempting to develop a platform similar to a dashboard where all the academic and student resources are available in one convenient location.
