

Negating Quantified Expressions

Every student in your class has taken a course in calculus

$P(x)$: x has taken a course in calculus

$\forall x P(x)$

Negation
It is not the case that every student in your class has taken a course in calculus

Negating Quantified Expressions

There is a student in your class
who has Not taken a course in
Calculus

$$\boxed{\neg \forall x Px} \equiv \exists x \neg Px$$

Exp 2

There is a student in this class
who has taken a course in calculus

$\neg \exists x Px$
It is not the case that there is a student
in this class who has taken a course in calculus

Every student in this class has not
taken a course in calculus

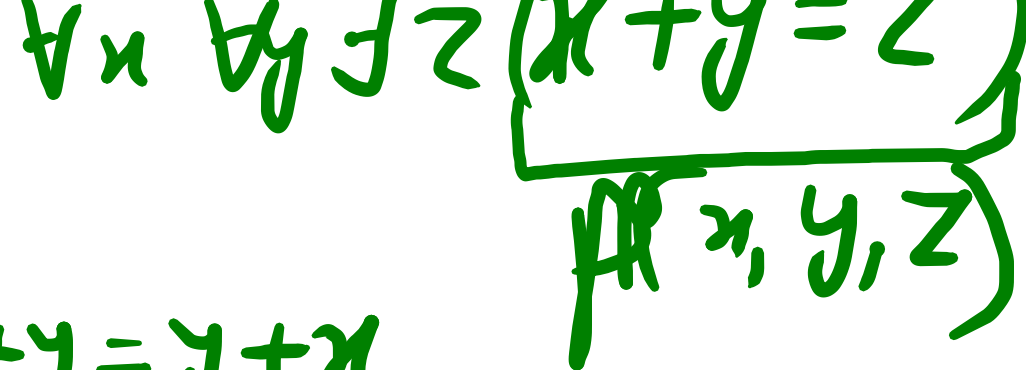

$$\neg \exists x Px \equiv \forall x \neg Px$$

$$\neg \forall x Px \equiv \exists x \neg Px$$

Nested quantifiers

Two quantifiers are nested if one is within the scope of the other

$$\forall x \exists y P(x, y)$$

$$\forall x \forall y \exists z (x + y = z)$$

$P(x, y, z)$

Exp

$$P(x, y) : x + y = y + x$$

$$\forall x \forall y P(x, y)$$

$$\forall y \forall x P(x, y)$$

D : ^{true} set of real number ^{true}

Exp $Q(x, y)!$ $x + y = 0$

$$\frac{\exists y \forall x Q(x, y)}{\quad}$$

$$D = \mathbb{R}$$

$$\underbrace{\forall x \exists y Q(x, y)}_{\text{true}}$$

$$\exists x \forall y x + y = 0$$

Falsch

Exp $Q(x, y, z) : \boxed{x+y=z}$

$\forall x \forall y \exists z Q(x, y, z)$ true

$\exists z \forall x \forall y Q(x, y, z)$
false.

$D = \mathbb{R}$

Rule of Inference

Propositional
log.

Defⁿ An argument is a set
of propositions.
